ABSTRACT

The participation and performance of 1999-2000 public school graduates in Texas on the College Board's SAT I: Reasoning Test and the ACT, Inc., ACT Assessment were investigated, along with results from other states and the United States. The highest combined number of Texas public school graduates ever, 120,077 or 62.2%, took either the SAT I or ACT before or during 1999-2000. That is, a greater number of Texas graduates than ever before received feedback through these programs about their academic readiness for college. Performance as measured by the combined number of tested graduates achieving either SAT I Total Scores of 1110-1600 or ACT Composite scores of 24-36, (32,747 students), was highest in 2000. The percentage of SAT-1- and ACT-tested graduates scoring within these higher ranges on either test was 27.3% in 2000, a 2.3 percentage point gain since 1991. African Americans, Hispanics, Whites, males, and females all showed similar trends in overall improvement since 1991. Most encouraging for all Texas graduates was that, while the numbers tested increased since 1999, the state's mean performance held steady at 20.3 on the ACT Composite and at 993 for the SAT Total. The percentage of all Texas SAT takers completing 20 or more academic course credits continued to increase, as did the percentage of ACT takers completed an ACT-defined core set of academic courses. The most general suggestion for strengthening SAT I and ACT test performance overall, or students' academic readiness for college, is to focus on improving the academic preparation of all students while encouraging testing participation. Two appendixes contain detailed score tables. (Contains 11 tables, 2 figures, and 60 references.) (Author/SLD)

Abstract. The participation and performance of Texas' 1999-00 public school graduates on the College Board's SAT I: Reasoning Test and the ACT, Inc., ACT Assessment was investigated, along with results from other states and the nation. The highest combined *number* of Texas public school graduates ever—120,077 or 62.2 percent—took either the SAT I or ACT before or during 1999-00. That is, a greater number of Texas graduates than ever before received feedback, via SAT I or ACT examination results, about their academic readiness for college. Performance as measured by the combined *number* of tested graduates achieving either SAT I Total scores of 1110-1600 or ACT Composite scores of 24-36—32,747—was highest in 2000. The percentage of SAT I- and ACT-tested graduates scoring within these higher ranges on either test was 27.3 percent in 2000—a 2.3 percentage point gain since 1991. African Americans, Hispanics, Whites, males, and females also showed similar trends in overall improvement since 1991. Most encouraging for *all* 2000 Texas graduates is that, while the numbers tested increased since 1999, the state's mean performance held steady at 20.3 on the ACT Composite and at 993 for the SAT Total. The percentage of all Texas SAT takers completing 20 or more academic course credits continued to increase, as did the percentage of ACT takers completing an ACT-defined core set of academic courses. Thus, the most general suggestion for strengthening SAT I and ACT test performance overall, or students' academic readiness for college, is to focus on improving the academic preparation of *all* students while also encouraging testing participation.

October 2001

PREFACE

Since 1989, the Texas Education Agency has reported selected results of college admissions tests for graduating seniors. In this 13th annual report, results are presented from the College Board's SAT I: Reasoning Test (formerly the Scholastic Aptitude Test, or SAT) and the ACT, Inc., (Enhanced) ACT Assessment for 1999-00 graduating seniors.

Since the fall of 1990, SAT/SAT I and ACT score data have been included in Texas' Academic Excellence Indicator System (AEIS). The AEIS was mandated in summer 1990 Texas legislation (Senate Bill 1) to establish a system of school academic performance accountability to local communities and school boards and to state education and legislative officials. Use of SAT and ACT data in the accountability system for acknowledging high levels of campus and district participation and performance began in 1993-94 and continues to date.

ACKNOWLEDGMENTS

This report was prepared by the Texas Education Agency's Research and Evaluation Division in an effort to promote understanding of the college admissions test scores of graduating seniors and to suggest areas for school-level educational attention.

Appreciation is expressed for the capable work done by ACT, Inc., staff (ACT Assessment data) and Educational Testing Service staff (College Board's SAT I: Reasoning Test score data) in providing the necessary college admissions test score data for this report. In addition, staff members in the Austin, Texas, regional offices of both ACT, Inc., and the College Board have been extremely helpful over the years in facilitating TEA's access to these test score data.

This report was produced with assistance from Yvonne Liang of the Performance Reporting Division, Department of Accountability Reporting and Research.

OVERVIEW

Results for 1999-00 graduating seniors are reported from the College Board's SAT I: Reasoning Test and from the ACT, Inc., ACT Assessment. *(The SAT I, a revised but comparable test, replaced the original Scholastic Aptitude Test [SAT] effective March 1994.)* In this report, Texas statewide, district, and campus results are displayed along with aggregate results for the nation and other states. Included also are selected test score trends and scores among student groups and among selected groupings of Texas regular and non-taxing public school districts as defined by the Texas Education Agency (TEA). The report also contains state, campus, district, and various district grouping summaries of the combined SAT I and ACT results, as defined within Texas' Academic Excellence Indicator System (AEIS) (TEA, in press-b). Report purposes are to promote understanding of the diversity existing among tested graduates and to suggest areas for educational action in the schools.

2000 SAT I AND ACT RESULTS IN REVIEW

A brief review of 2000 SAT I and ACT results is provided to help reinforce the targeting of improvement efforts in areas under the most direct control of schools—that is, student access to educational opportunities and testing participation. Beginning with 1995-96 examinees in previous TEA reports, SAT I results have been reported on the recentered score scale. Thus, all prior years' SAT I score results in this report are reported on the recentered score scale. For interpretation purposes, note that comparisons among aggregate scores from any educational entity, state, or group are best made when testing participation rates, student characteristics, and education and policy contexts are similar. Highlights below focus on differences between/among Texas and the nation and other states, Texas school districts, various types of students, and students within schools.

- In 2000, numbers of both SAT I- and ACT-tested graduates were up from the previous year—up 4.6 percent for the SAT I and 4.5 percent for the ACT in Texas and up 3.3 and 4.5 percent, respectively, for the SAT I and the ACT nationally. In Texas, the highest number of graduates ever took one of the two examinations; there were 108,919 SAT I-tested graduates and 68,010 ACT-tested graduates.

- The last decade showed some recovery over the previous decade's decline in both Texas and national SAT/SAT I averages, with relatively more improvement in Texas within the last 14 years. On the *recentered* scale in 2000, this relatively larger 14-year gain in Texas still held true even though Texas' mean SAT I Total score held steady at **993**, 26 points below the nation's mean of **1019**. In 1999, Texas at **993** was 23 points below the nation at **1016**. It is encouraging that the state's math performance increased slightly from 499 to 500, while verbal performance slipped by only one point from 494 to 493, as the number tested again increased substantially over the past year.

- Texas versus national ACT score trends mirrored SAT/SAT I score trends over the same period. Even with state and national gains in the number of ACT examinees, both the 2000 Texas average ACT Composite score at **20.3** and the national average at **21.0** remained unchanged from 1999.

- Although SAT I-tested students in Texas had less academic preparation than students nationally, the gap has been closing—percentages completing 20 or more credits improved from 23 percent in 1991 to 49 percent (versus 50% nationally) in 2000. While 2000 SAT I- and ACT-tested African American and Hispanic students had fewer academic credits than White and Asian American students, the percentage of Texas SAT I examinees completing physics and calculus courses who are female continued to improve. Texas SAT I-tested males more often than females reported plans for receiving college advanced placement or credit in chemistry, computer science, mathematics, and physics. Altogether, the number of students reporting plans for receiving college advanced placement or credit was up across college courses in general.

- Even with recent growth in numbers and percentages of test takers who are members of ethnic minority groups, Texas minority scores on the ACT, except for the ACT English test, have shown some improvement since 1991. Although increasing percentages of African American and Hispanic students completed core academic credits over the past few years, scores of White and Asian American students still tended to be higher. Except for Hispanics, Texas SAT/SAT I scores across ethnic groups continued improving more than scores nationally from 1987-2000.

- A relatively higher percentage of 2000 Texas public school graduates took the SAT I (50.0%) compared to the ACT (30.8%); altogether, 62.2 percent (up 0.4 percentage point since 1999) took the SAT I and/or the ACT, based on unduplicated student counts. These percentages were below the highest 2000 state percentages reported for SAT I-tested graduates in the District of Columbia (89%) and for ACT-tested graduates in Mississippi (84%).

- Generally consistent with the separate Texas SAT/SAT I and ACT mean score results, the percentage of African American (7.8%) and Hispanic (11.1%) public school students scoring at or above the SAT/SAT I Total score criterion of 1110 or ACT Composite score criterion of 24 has improved by 1.3 percentage points for African Americans and by 0.8 percentage point for Hispanics since 1991. The percentages of Native American (26.7%), White (36.4%), and Asian American (42.9%) students scoring at or above criterion were still higher than those of other ethnic groups. The percentage meeting criterion was highest for Whites in 1999-00 but was highest for African Americans and Hispanics in 1994-95. Relative to criterion, male students still out-performed female students, but the gap between males and females has narrowed since 1991.

- In general, states with lower percentages of SAT I-tested seniors tended to show higher state mean SAT I scores, and vice versa. A similar relationship between state mean ACT scores and percentages of seniors tested was extremely weak. In Texas, the correlation between district average SAT I or ACT scores and district percentage of seniors tested was weak.

- Considering 2000 SAT I and ACT results together for 1,038 public school districts (including charter schools) with graduating seniors or test score data indicated that the vast majority of districts (893) participated in both SAT I and ACT testing; only 54 districts showed no testing participation. A total of 944 districts had five or more graduates taking the SAT I and/or ACT.

- Consistent with previous findings, mean SAT I Total and ACT Composite scores tended to go up as the values of certain demographic variables rose, including district wealth, student family income, district percentage of non-low-income students, district average teacher salary, and district percentage of teachers with advanced degrees.

- In general, SAT I and ACT average scores also increased as the values of selected educational variables went up, including district average percentage of students passing all sections of the 1999-00 Texas Assessment of Academic Skills (TAAS) test, prior-year district percentages meeting the SAT I and/or ACT criterion score, student letter-grade average, and number of academic courses completed.

The most general suggestion to the educational community for improving students' SAT I and ACT scores, or academic preparation for college, is to focus on improving the academic preparation of all students while also encouraging testing participation. That is, schools and communities should work on increasing educational inputs rather than faulting school or student demographics, which are less subject to the direct influence of schools.

Interpretative Issues

For individual students, college admissions tests are measures of developed academic abilities that are best used in conjunction with other measures, such as high school grade point average and courses taken, to predict academic performance in college. When examined over time, aggregate changes in these test scores may indicate how well educational institutions are preparing students for college. However, it is always inappropriate to make decisions about individuals, groups of individuals, or educational institutions based on SAT/SAT I or ACT test scores alone. In addition, institutions with smaller numbers of test takers (e.g., under 50 or under 100 tested) tend to show greater mean score changes from one year to the next than those with higher numbers of test takers (ACT, Inc., Research Division, 1998, 2000; College Entrance Examination Board [CEEB], 2000a). Because not all graduating seniors take the SAT I or ACT, comparisons among educational entities are best made when the percentages of students tested, student characteristics, and education and policy contexts are similar (also see CEEB, 1988, and ACT, 2000e). Ultimately, the critical outcome is increasing student academic preparedness as reflected by increased scores without reducing students' participation in (percentages tested), or access to, the testing.

Score Scales

Verbal and Mathematics scores from the SAT I range from 200 to 800 and sum to the SAT I Total score ranging from 400 to 1600. All previous years' SAT/SAT I and 1999-00 SAT I scores in this report are reported on the recentered scale. However, SAT/SAT I results prior to 1995-96 included in previous TEA reports (e.g., TEA, 1997d) are reported on the original scale. Recentering reset the average or midpoint of the score distributions at approximately 500 on both SAT I Verbal and Mathematics scales. ***Thus, all current and prior years' SAT/SAT I scores in this report, because they have been placed on the recentered scale, cannot be directly compared to scores in reports of results prior to 1995-96, which are on the original scale.*** Equivalence tables are available from the College Board for converting both individual and average scores from the original to recentered scale, and vice versa.

Since October 1989, the ACT Assessment has consisted of English, Mathematics, Reading, and Science Reasoning test scores with a standard score range of 1 to 36; the Composite is the average of these four scores. ***Note that ACT scores beginning in 1989-90 and ACT scores reported before 1989-90 are not comparable.*** Equivalence tables are available from ACT for making score conversions from the original to the Enhanced ACT scale, and vice versa.

Access to Testing

Fees and fee waivers. Effective fall 1999 through summer 2000, basic test fees were $23.50 for the SAT I (CEEB, SAT Program, 1999) and $22.00 for the ACT (ACT, 1999a), which included the costs of test registration and sending score reports to various institutions. Effective in fall 2000, the SAT I basic test fee increased to $24.00 (CEEB, SAT Program, 2000), and the ACT fee rose to $23.00 (ACT, 2000a). Beginning in fall 2001, the basic SAT I test fee will increase to $25.00 (CEEB, SAT Program, 2001b), while the ACT fee will rise to $24.00 (ACT, 2001d). For both the SAT I and the ACT, there is no additional charge for score reports sent to up to four colleges and scholarship programs.

Test fee waivers from the College Board and ACT for the SAT I and ACT are available to junior and senior high school students based on economic need. Criteria for determining a student's eligibility include: family income; whether the student's family receives public assistance; whether the student lives in a foster home; and whether the student participates in a program for the economically disadvantaged, such as Upward Bound. For the SAT I, a student may receive a maximum of two fee waivers; one may be used in the junior year, the other in the senior year. For the ACT, a student may receive only one fee waiver, which may be used in either the junior or senior year, but only one indicator of economic need has to be met for a student to qualify. However, in many Texas schools and districts, availability of local funding and local criteria determine the extent to which testing fees for additional students and tests may be covered.

Services for students with disabilities. Both the College Board and ACT, Inc., provide special services for students with disabilities (ACT, 2001b; CEEB, SAT Program, 2001a). To qualify, a student must have a disability that necessitates testing accommodations, as supported by documentation on file at school (e.g., an individual education plan, a 504 Plan, or a professional evaluation). The student also must be currently receiving special accommodations for school-based tests; however, an exception may be allowed based on additional documentation provided by an appropriate school staff member or a qualified professional. Texas State Board of Education rules relating to testing accommodations for school-based tests are specified in 19 Texas Administrative Code [TAC] §101.3 (1999b).

Various accommodations are available depending on the nature of the disability—for example, a magnifying device, typewriter or computer, Braille device, sign language for verbal instructions, and extra testing time. Depending on the type and extent needed, special testing accommodations are provided through the SAT Program at national test centers or students' schools (or other ETS-approved sites) (CEEB, SAT Program, 2001a). Special testing accommodations for standard or extended time on ACT Assessments can be arranged at national test centers for certain test dates throughout the year or at students' schools (ACT, 2001b). Student score reports are marked as "Nonstandard Administration" (for extended time only) for the SAT I or as "Special" for the ACT. Neither score report indicates the reason for special testing accommodations.

Specific Uses of Score Results in Texas

Results from SAT/SAT I and ACT college admissions tests are used for a variety of specific purposes in Texas. Some of these uses are specified in Texas statute, while other uses are based on state-level rule or policy or the varying policies of the state's colleges and universities.

College admission requirements and required notifications. Historically, each institution of higher education in Texas has established its own criteria for admissions, as is the case in many states. Consistent with the recommendations of the College Board (CEEB, 1988), most senior, or four-year, colleges and universities have taken into consideration some combination of a student's college admission test scores (SAT I and/or ACT) and school achievement record (e.g., courses taken, grade point average, class rank, etc.) (CEEB and

ETS, 1997a). The score standards required for the SAT I and ACT vary significantly, based on the selectivity of the institution, but often are tied inversely to the student's class rank in high school—that is, the higher the class rank, the lower the test score required, and vice versa. Other institutions, however, including many junior and community colleges, maintain open admission policies under which any person with a high school diploma or its equivalent may be accepted.

Beginning with fall 1998 first-time freshman admissions, Texas public higher education institutions were required to admit applicants who graduated (within one of the two preceding school years) with a grade point average in the top 10 percent of their class (Texas Education Code [TEC] §§51.801-51.809, 1997). After granting such general admission, Texas higher education institutions may determine whether or not admitted students need additional preparation for college-level work or need to participate in a retention program. The Texas legislation also allows institutions to determine locally whether or not additional automatic admissions will be adopted—that is, students graduating with grade point averages in the top 25 percent of their classes. Otherwise, for other applicants, institutions shall consider all, any, or a combination of socioeconomic indicators and other factors (e.g., academic record, performance on standardized tests, etc.) specified in Texas statute in making admission decisions, except for those institutions with open enrollment policies. Texas Higher Education Coordinating Board (THECB) rule (19 TAC §5.9, 2000) further specifies timelines and criteria for schools and districts to use in determining class rank and when and how higher education institutions may limit statutory automatic admissions. Thus, despite Texas legislation, admission policies can still vary substantially among Texas public and any other higher education institutions.

More recently, the 76th Texas Legislature passed Senate Bill 510 (adding TEC §28.026, 1999), which mandates notification responsibilities for school districts to help ensure that all students are aware of the top 10 percent automatic college admission provisions (TEC §51.803, 1999). For example, high schools in each district are required to display the specifications of TEC §51.803 (1999) in all principals' and counselors' offices and in each administration building. In addition, districts are responsible for providing detailed explanations of this statute to all high school counselors and class advisors. Counselors and advisors, in turn, are responsible for explaining the statute's substance to eligible students. Ultimately, the district must also provide (at the start of the class's senior year) each eligible senior student with written notice of his or her eligibility, along with a written explanation of the statute's substance.

Exemption from other testing. In response to public concerns that a growing number of high school graduates lacked the academic skills needed to perform effectively in college, the Texas Legislature in 1987 established a system of testing and remediation called the Texas Academic Skills Program (TASP) (TEC §51.306, 1988). Under the program, each student (with certain exceptions) who enters a public institution of higher education must take a diagnostic test of basic reading, writing, and mathematics skills. The TASP Test cannot be used as a condition of admission to the institution, but must be taken before the student completes nine semester credit hours of coursework. Effective in fall 1998, students must be tested ***before*** enrolling in college-level courses, except under certain conditions (TEC §51.306, 1997). Colleges and universities are then responsible for providing remediation to students who fail any part of the test.

In 1993, the legislature created special exemptions from the TASP Test based on SAT, ACT, and exit-level Texas Assessment of Academic Skills (TAAS) scores (TEC §51.306, 1994). The 74th Legislature extended the TASP exemptions in 1995 by requiring the THECB to lower the target scores used to determine eligibility for the exemptions. Effective in fall 1997, to qualify for an exemption based on the ACT, a student must receive an ACT Composite score of 23 or higher, with ACT English and Mathematics scores of 19 or higher. For SAT I tests taken in April 1995 or after (recentered score scale), a student must receive an SAT I Total score (Verbal + Mathematics) of 1070 or higher, with scores on Verbal and Mathematics sections of 500 or higher. For SAT/SAT I tests taken before April 1995 (original score scale), the SAT/SAT I Total score must

be 970 or higher, with a Verbal score of 420 or higher and a Mathematics score of 470 or higher. Including these exemptions, THECB guidelines for TASP exemptions based on the exit-level TAAS are also specified in 19 TAC §5.314 (1999a). Further exemptions from the TASP test were added by the 77th Legislature in House Bill 2109 for graduates of Texas public high schools or accredited private high schools with grade point averages of 3.5 or higher on a 4.0 or equivalent scale. In addition, these graduates must have completed the Texas public high school Recommended curriculum or similar curriculum program if graduating from high schools out of state.

Campus- and district-level performance accountability reporting. In 1989, the Texas Legislature created the Academic Excellence Indicator System (AEIS) and directed the State Board of Education (SBOE) to adopt and report a set of campus- and district-level indicators of student performance that included, among others, performance on the SAT and ACT (TEC §21.7531, 1990). The SAT/ACT indicator adopted by the board in November 1990 encompasses three measures for reporting test results (SBOE, 1990). The first was the percentage of graduates who scored at or above the criterion score on either test (24 on the ACT Composite or an SAT I Total score of 1000 on the original scale). Effective with the 1996-97 AEIS report, a redefined measure beginning with the reporting of 1995-96 SAT I and ACT scores was approved by the commissioner of education—that is, the percentage of *examinees* (rather than graduates) scoring at or above the criterion of a 24 on the ACT Composite or an SAT I Total score of 1110 on the recentered scale (TEA, 1997c, 2001). The second measure is a participation rate, or the percentage of graduates who took either college admissions test. The third is the average score for each test. For purposes of year-to-year comparisons, this information is reported for the current (most recent year with available data) and previous year when comparable data are available.

Since 1994, when the AEIS indicators were first grouped into different categories for accountability purposes, the SAT/ACT indicator has been reported as an "additional" indicator (TEA, 1994b, 2001). Unlike "base" indicators, additional indicators are not used to determine campus or district accountability ratings. They are, however, used to acknowledge high levels of campus or district performance. Any district rated *Academically Acceptable* or higher and any campus rated *Acceptable* or higher is eligible for acknowledgment on additional indicators. Effective with 1996-97 accountability system acknowledgment ratings, only one level of acknowledgment, *Acknowledged*, along with new standards, began to be used (TEA, 1997c). For *Acknowledged* campus or district performance, 70 percent or more of the graduates must take either the ACT or SAT/SAT I, and 50 percent or more of examinees must score at or above the criterion score for either test. Standards must be met for each student group (African American, Hispanic, and White) at a campus or district, as well as for all students combined. Previously, campus and district performance was acknowledged at two separate *Exemplary* and *Recognized* levels; details on standards for these previous two levels can be found in TEA accountability manuals published before 1997. Further detail on current college admissions indicator definitions and acknowledgment standards can be found in TEA's current accountability manual (TEA, 2001).

School- and district-level awards and recognition. From 1989-90 through 1994-95 and 1997-98 through 1998-99, state appropriations have been made available for monetary awards to campuses with students demonstrating substantial gain in academic performance on indicators such as those in the AEIS. The first set of campus monetary awards, made in fall 1990 by the Governor's Educational Excellence Awards Committee (TEC §§34.001-34.009, 1990), was based on SAT and ACT performance indicators, among others, for high schools. (Of course, indicators for non-secondary schools excluded SAT and ACT measures.) Afterwards, the program was transferred to TEA as the Texas Successful Schools Award System, or TSSAS (TEC §§34.001-34.009, 1992). During the second year of TSSAS (1992-93), SAT and ACT indicators were once again considered along with other AEIS indicators for monetary awards for high school campus performance gain. During the third year of TSSAS (1993-94), campuses received non-monetary TSSAS acknowledgment for meeting AEIS *Exemplary* and *Recognized* standards for SAT and ACT indicator performance, which was in

alignment with additional acknowledgment status given this indicator under the AEIS. Since then, neither monetary nor non-monetary awards have been made to campuses for SAT and ACT performance under TSSAS. Though TSSAS was retained in statute for the fiscal year (FY) 1996 through FY 1997 biennium (TEC §§39.091-39.096, 1996), no appropriations were made to fund the awards. Recent legislation (TEC §§39.091-39.096, 1997, 1999) continued TSSAS through the previous and current bienniums and restored funding for the awards (Riders 54, 47, and 45 of the Appropriations Act, Article III—Education; 75th, 76th, and 77th Legislatures, respectively).

Data Sources

Some data in this report originate from summary reports of state and national test score profiles of public and non-public high school graduates released annually by the College Board (CEEB, 1999a, 1999b, 2000a, 2000b, 2000c, 2000d; CEEB, Southwestern Regional Office, 2000) and by ACT, Inc. (ACT, 1999b, 1999c, 2000a, 2000b, 2000c; ACT, Southwest Region, 1999, 2000) in late summer. Texas' public school student test score data were provided directly to TEA by the two testing programs. Additional TEA district and campus characteristics data were examined in conjunction with the most recent scores from 1999-00 seniors (through March 2000 for the SAT I).

Texas and National Trends

The Texas mean SAT I Total score (sum of Mathematics and Verbal scores) on the *recentered* scale remained stable at **993** from 1999 to 2000, while the national mean score went from **1016** to **1019**, increasing the difference between Texas and the nation from 23 to 26 points. During the past 30 years, the maximum difference of 31 points below the national mean (on the original scale) occurred in 1984 and in 1987. Over the same period, the mean ACT Composite score difference between Texas (20.3 in 2000) and the nation (21.0 in 2000) was 0.7 point in 2000—only 0.1 point greater than the smallest difference ever in 1993 and 1994 of 0.6 point. One reason often given for score differences between Texas and the nation concerns the relatively higher proportions of traditionally low-scoring, academically under-prepared examinees in Texas. Repeatedly, findings reported by the two testing programs and researchers have shown the tendency for test scores to increase as the amount of academic coursework goes up.

In general, Texas SAT/SAT I-tested students have completed fewer academic courses than students nationally (49% versus 50%, respectively, at the 20+ courses level in 2000), but the difference in 2000 was the smallest of the decade. While even at comparable levels of academic preparation, students nationally outscored Texas students, the gap was smallest at the highest level of preparation (at the 20+ courses level) and was greatest at the lowest level of preparation (under the 15 courses level). Despite the fact that the numbers of ACT- and SAT/SAT I-tested students who are Hispanic and African American have risen at greater rates in Texas than in the nation, ACT Composite scores and almost all SAT/SAT I scores across Texas student ethnic groups showed greater improvement overall than scores nationally since 1987. Texas minority student scores on the ACT (except for the ACT English test) have continued improving since 1991, and increasing percentages of minority students have completed core academic coursework, as defined by ACT. Typically, Texas SAT/SAT I and ACT score results have shown African American and Hispanic students completing relatively fewer academic courses when compared to White and Asian American students—one possible reason for mean score discrepancies among ethnic groups.

College Board reports indicate that the generally higher scores achieved by men relative to women on the SAT/SAT I may relate to the rigor of academic courses they take. Although the proportion of SAT examinees completing physics and calculus who are female has equaled or exceeded examinees who are male since 1998, females remain underrepresented among all examinees completing such courses when compared with their percentage in the test-taking population. In 2000, mean Texas ACT Composite scores were 20.4 for women and 20.3 for men. Thus, the higher scores achieved by women on the ACT English and Reading tests more than offset the higher scores obtained by men on the ACT Mathematics and Science Reasoning tests. While mean Texas ACT Composite scores have been virtually the same for males and females since 1991, the Mathematics, English, Reading, and Science Reasoning score differences deserve continued scrutiny. For further detail on some of the 1999-00 Texas versus national SAT I results discussed above, see Table 1; for similar 1999-00 ACT results, see Table 2. For specific SAT/SAT I and ACT mean score trends by ethnicity, see Tables A-1 and A-2 in Appendix A; for SAT/SAT I and ACT trends in examinee numbers and percentages by ethnicity, see Table A-3.

Data Sources: ACT Program; TEA, PEIMS, actual public school graduate numbers (excluding those in special education); ACT (2000a) report of WICHE projections of 2000 graduating senior enrollments; TEA, Research and Evaluation Division, analysis of ACT data of Texas public high school graduates.

*Criterion score percentages based on total test takers rather than on all non-special education graduates, effective with 1995-96 examinees in previous TEA reports.

AEIS Indicators of Texas College Admissions Test Results

As mentioned previously, Texas' Academic Excellence Indicator System (AEIS) includes measures of combined but unduplicated percentages of graduating seniors tested and percentages of examinees meeting a specific score criterion on either the SAT I (SAT I Total: at or above 1110) or the ACT (ACT Composite: at or above 24). In other words, even if a student took both tests, each individual's participation or criterion score achievement is counted only once in calculating these percentages. Before 1990-91, TEA did not receive the type of data from the two testing programs that allowed calculation of these values.

Table 3 displays the statewide percentages of SAT I- and/or ACT-tested 1999-00 public school seniors and the percentages of examinees meeting the criterion score on either test. (Note that Table 1 on page 8 contains these percentages for the SAT I; Table 2 on page 9, for the ACT.) A greater percentage of females than males participated in SAT I and/or ACT testing, and the female participation rate grew more from 1990-91 to 1994-95 and subsequently declined less rapidly than the rate for males over the same time periods (see Figure 1). In contrast, a higher percentage of males than females met the criterion for either test from 1991 through 2000, but this difference between males and females has decreased over the last 10 years (see Figure 2 on page 12). This was consistent generally with Texas and national results for the SAT I and ACT separately. Gaps among ethnic groups were apparent from inspection of the differences in percentages meeting or exceeding criterion scores and also were consistent with separate SAT I and ACT results.

Table 3
Numbers* and Percentages* of SAT I- and/or ACT-Tested Graduates and Examinees At or Above Criterion Score on Either Test (1999-00 Texas Public School Graduates)**

Group	Number* Tested	Number* of Graduates	Percent* Tested	Number* At or Above Criterion**	Percent* At or Above Criterion**
All Groups	120,077	192,943	62.2	32,747	27.3
Females	65,948	102,431	64.4	16,433	24.9

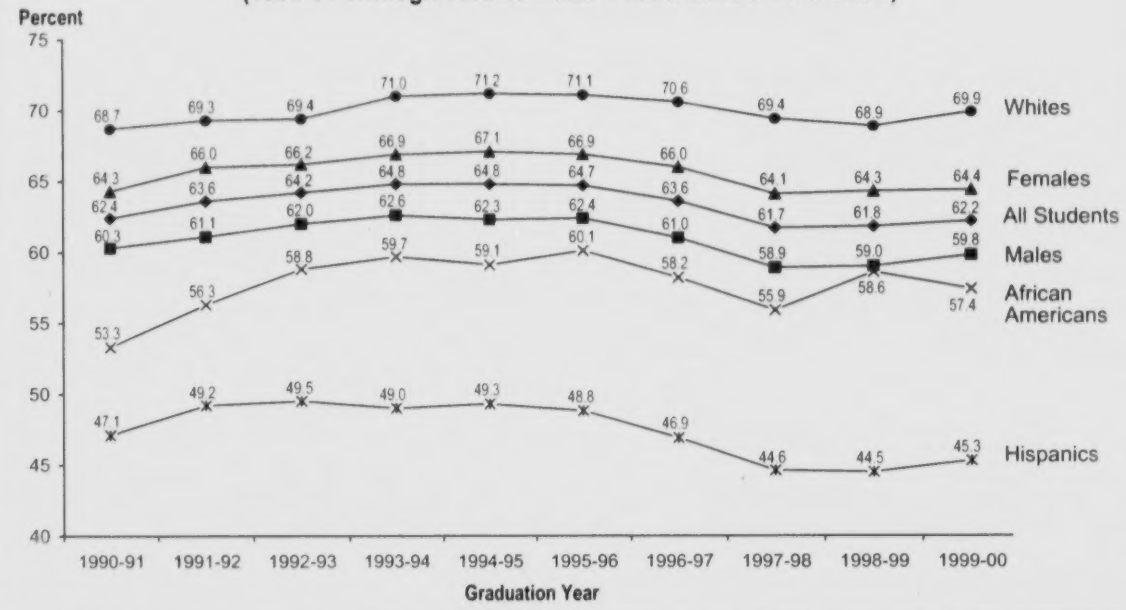
Native American	367	463	79.3	98	26.7
White	69,902	100,025	69.9	25,423	36.4

Data Sources: TEA, PEIMS, actual public school graduate numbers (excluding those in special education); TEA, Research and Evaluation Division, analysis of CEEB and ACT program data of Texas public high school graduates with percentages from analyses also reported in AEIS (TEA, in press-a).

*Group numbers may not add to total for all groups because ethnic group for some students was not included or was not known.

**The AEIS college admissions test criterion scores are an SAT I Total = 1110 and/or an ACT Composite = 24; prior to class of 1995-96 scores, the SAT/SAT I Total criterion was 1000. Criterion score percentages are based on total examinees taking one or both tests rather than on all non-special education graduates, effective with 1995-96 examinees in previous TEA reports.

Figure 1
Trends in Percentages of SAT/SAT I- and/or ACT-Tested Graduates
(1990-91 Through 1999-00 Texas Public School Graduates)



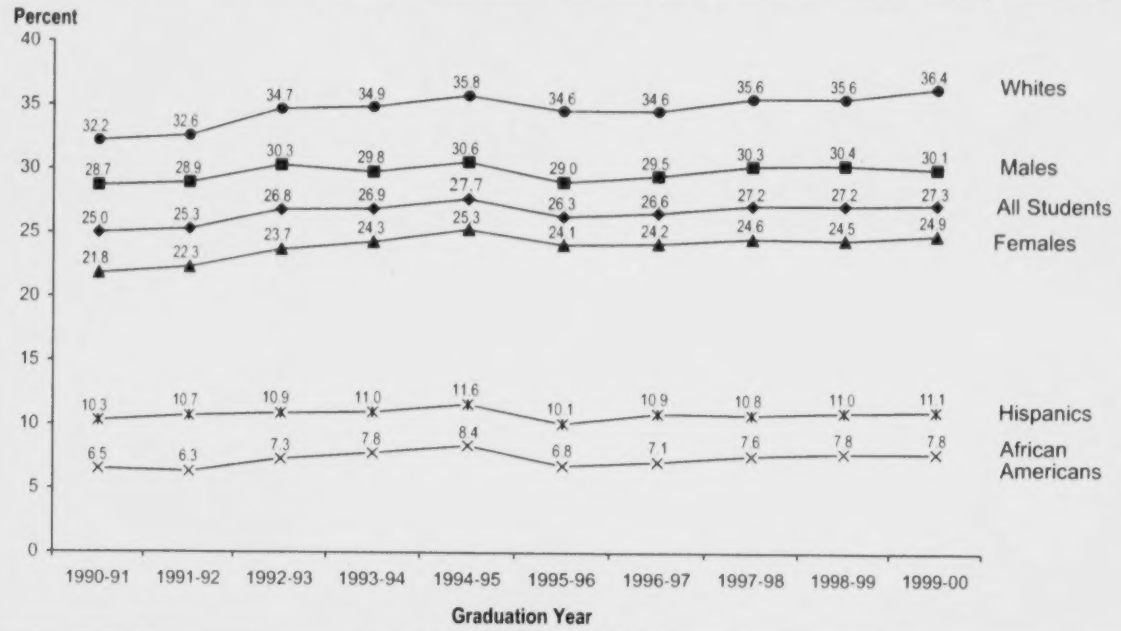
Data Sources: TEA, PEIMS, actual public school graduate numbers; TEA, Research and Evaluation Division, analysis of CEEB and ACT program data of Texas public high school graduates with percentages from analyses also reported in AEIS (TEA, 1993, 1994a, 1995, 1996, 1997a, 1998a, 1999, 2000, in press-a).

TEXAS AND THE OTHER STATES

Table 4 on page 13 presents results of the SAT I testing program for the 50 states and the District of Columbia (DC) for 1999-00 (also see CEEB, 2000a, for mean Verbal and Mathematics scores). Average scores on the Verbal portion of the test ranged from 484 to 589, and on the Mathematics portion from 482 to 609. The percentages of students taking the test ranged from 4 percent in Mississippi, North Dakota, and South Dakota to 89 percent in the District of Colombia. These figures were calculated by the College Board based on estimates of the total number of public and non-public school graduates in each state and in the nation. The total number of 1999-00 Texas graduates who took the test was 108,919; of these, 96,516 were public school graduates—an increase of more than 4,300 tested from the previous year, but a tenth of a percentage point decline in the percentage of graduates tested (see Table 1 on page 8).

Table 4 also presents ACT results by state for 1999-00 (also see ACT, 2000b). Mean ACT composite scores ranged from 17.8 in DC to 22.7 in Oregon, while percentages of seniors tested ranged from 3 percent in Delaware to 84 percent in Mississippi. Often, states with low percentages of ACT takers had high percentages of SAT I takers, and vice versa. Texas had 68,010 ACT-tested graduates; of these, 59,491 were public school graduates—an increase of nearly 4,300 tested from the previous year, along with 0.8 percentage point increase in the percentage of graduates tested.

Figure 2
Trends in Percentages of SAT/SAT I and/or ACT Examinees At or Above Criterion* Score on Either Test (Examinees Indicating Texas Public School Graduation 1990-91 Through 1999-00)



Data Sources: TEA, Research and Evaluation Division, analysis of CEEB and ACT program data of examinees indicating graduation from a Texas public high school during the years above. Criterion score percentages, previously based on all non-special education graduates in AEIS (TEA, 1993, 1994a, 1995, 1996), were recalculated based on total examinees taking one or both tests to be consistent with the new definition for reporting 1995-96 college admissions data effective since the 1997 AEIS (TEA, 1997b, in press-b).

*Effective beginning with 1995-96 scores, the AEIS college admissions test criterion scores are an SAT I Total = 1110 and/or an ACT Composite = 24; in prior years, the criterion for the SAT/SAT I Total score = 1000, while the ACT Composite criterion has remained the same.

Data Sources: CEEB (2000a) for mean SAT I Verbal and Math scores, used to compute SAT I Total scores, and for percentages of SAT I-tested graduates; ACT (2000a) for mean ACT Composite scores and percentages of ACT-tested graduates.

Note: Above data include both public and private school graduates. Percentages of SAT I-tested and ACT-tested graduates are based on projected 2000 graduating senior enrollments developed by WICHE.

State and District Percentages of SAT I- and ACT-Tested Students

As in previous years, results in Table 4 on page 13 indicate that higher 2000 mean SAT I scores by state (including DC) were associated with lower percentages of graduating seniors taking the test. The same relationship was still evident but much weaker between ACT mean Composite scores and percentages tested across states. Reasons often given for this relationship, especially for the SAT I, are that primarily only the most academically able in the state take the test and/or that the majority of the state's colleges and universities historically prefer or require another admissions examination such as the ACT. In contrast, relatively low mean SAT I scores and high percentages tested in states such as Texas appear to occur because more students of varying academic backgrounds are tested, which lowers averages overall. Regardless of the extent of this relationship, the percentage of graduates tested is a critical indicator of access to SAT I or ACT testing and the availability of external feedback, via test results, about students' academic readiness for college.

Most importantly, mean score differences among states, districts, and other student groupings also occur along with differences on other educational and demographic factors in addition to differences in the percentages of students tested. This means that considering only the simple relationship between mean scores and the percentages tested in interpreting and understanding mean score differences is most often insufficient. Thus, mean score comparisons are likely to be most appropriate when the percentages tested, demographics, and education and policy contexts are most similar. For district mean data within Texas, negligible correlation existed between SAT I, as well as ACT, mean scores and percentages tested. Statewide, however, districts also varied greatly (and more so than states) in patterns of SAT I versus ACT testing participation, percentages tested, and other educational and demographic factors.

Districts and Campuses Within Texas

Of the 1,038 public school districts (including 1,598 campuses) with either graduating seniors or test score data in 1999-00, 893 districts and 1,136 campuses (including charter schools) had both SAT I and ACT test takers. There were 64 districts and 78 campuses with ACT-tested students only, 27 districts and 60 campuses with SAT I-tested students only, and 54 districts and 324 campuses showing neither SAT I nor ACT participation. Of the 984 districts and 1,274 campuses with SAT I and/or ACT participation, 347 districts and 414 campuses showed fewer than five graduates meeting the SAT I and/or ACT criterion score, 40 districts and 75 campuses had fewer than five graduates taking either test, and 8 districts and 17 campuses had no graduates according to TEA records. SAT I results for each district and campus are shown in Table B-1 in Appendix B; ACT results are shown in Table B-2; combined ACT and SAT I results as defined under AEIS are in Table B-3.

District, Campus, and Student Characteristics Data

Results described in the paragraph below are based on summaries of scores grouped by the 25 groupings of districts with similar characteristics shown in Table B-4 in Appendix B. The grouping characteristics are defined in the Glossary beginning on page 103. Other results described in the paragraph below but not shown in the table concern summaries of scores grouped by student-level characteristics, which were obtained for the SAT I from the Student Descriptive Questionnaire (SDQ) and for the ACT from the Student Profile Section and High School Course/Grade Information portions of the Student Information booklet.

Many of the separate mean SAT I Total and ACT Composite score results and the 2000 combined SAT I and/or ACT examinee percentages meeting the score criterion (per AEIS) were consistent with most College Board and ACT published findings. For instance, increasing district wealth, increasing student family income, or decreasing percentages of low-income students within districts corresponded with rising mean scores for data from the 1988 through 2000 school years. Other positive relationships and similarities existed between the college admissions score data and the: (a) district average percentage of students passing all sections of the 1999-00 TAAS test; (b) district percentages tested and percentages meeting the criterion on prior year SAT I and/or ACT scores; (c) district average teacher salaries; (d) district average percentage of teachers with advanced degrees; (e) student self-reported letter-grade average; and (f) student self-reported number of academic courses completed. That is, mean scores went up as the values of each of these variables rose. Additional specific score associations have been described in earlier agency publications (see, e.g., TEA, 1998b).

Considerations for Educational Action in the Schools

A distinction should be made between demographic and educational variables related to test scores. This distinction is important because the education community should focus on the attributes that it can most directly influence. In other words, variables such as family income or parent level of education are not under the public school's practical domain of control. Indeed, recent Texas legislation appears to be recognizing the importance of educational variables in providing support for financially needy college-going students. For example, the 76th Texas Legislature created two new grant programs designed to cover Texas college tuition and required fees, effective in fall 1999. More specifically, the two grant programs target financially needy Texas resident students who have completed the Recommended High School diploma program, or the equivalent, to the extent the applicable courses were offered in their schools. The THECB administers the Toward Excellence, Access, and Success (TEXAS) and Teach for Texas grant programs (TEC §§56.301-56.310, 1999). Both the THECB and Texas school districts have substantial notification responsibilities concerning these grants. Most recently, the 77th Texas Legislature passed Senate Bill 1596 (which added TEC §§56.351-56.357) to establish the TEXAS II grant program, which will target financially needy students who are attending two-year Texas public higher education institutions, effective in fall 2001.

In adhering to the importance of educational variables mentioned above, a number of approaches are suggested for educational action in the schools to improve students' academic preparation for college. These center on:

- encouraging all students to take a greater number of academically challenging courses such as Advanced Placement (AP), International Baccalaureate (IB), and other TEA-defined advanced courses, which can help fulfill the more difficult public high school diploma requirements of the Recommended or Distinguished Achievement programs;
- increasing the number and diversity of rigorous, challenging courses offered (e.g., ACT, Inc., Research Division, 1999, 2001);
- ensuring that all students are held to consistently high standards; and
- encouraging more participation in AP, IB, and pre-college (e.g., the College Board's PSAT/NMSQT and the ACT, Inc., PLAN tests) and college admissions testing programs.

Schools must ensure that the courses offered cover genuinely advanced material and are not simply labeled as advanced courses. For some districts, the most practical option for expanding the array of rigorous course offerings may depend on technology such as distance learning. Schools and districts must also ensure that students are held to high standards that are consistent over the years through grades that are assigned. Some evidence from the college admissions testing data suggests that student grade point averages have been increasing at a relatively greater rate than scores on examinations such as the SAT/SAT I, and that this trend has been even greater in Texas than nationally (e.g., CEEB, Southwestern Regional Office, 2000).

While about half of the students taking the SAT I in a given year retake the test one or more times at later dates, student performance on repeat testing can be affected by a number of factors. For example, those retaking the test generally have higher initial scores than those who only take the test once. Factors that can relate to performance on repeated testing include when students are initially tested, the length of time between testing, and the score on the initial testing. (For further information concerning SAT I score changes that can be expected considering these and other factors, see CEEB, Office of Research and Development, 1998; for similar information regarding expected ACT score changes, see Andrews & Ziomek, 1998).

Encouraging students to take courses that focus primarily on preparation (coaching) for taking college admissions tests should be carefully considered. Only well-designed and well-executed supplemental courses focused on improving test-taking strategies, coupled with instruction that broadly addresses verbal or quantitative skills, are recommended for consideration, especially for students from traditionally low-scoring groups. Smyth's (1990) study of the effects of SAT coaching, which controlled for differences in students' initial scores and number of tests taken, found the average net gains attributed to coaching to be quite small. The Powers and Rock (1998, cited in CEEB, Office of Research and Development, 1999) study generally confirmed these same effects for formal and out-of-school coaching programs on the SAT I, while controlling for a number of additional differences on descriptive and demographic characteristics between the coached and uncoached groups. In summary, the educational goal is to better prepare students academically for college, not simply to raise college admissions test scores.

Data Source: ACT Assessment Program. Mean scores are based on both public and private school students.

*Scores beginning with the class of 1990 are for the (Enhanced) ACT, a revised ACT; all scores are reported on the Enhanced ACT score scale. Scores for subject tests by ethnic group were unavailable on the Enhanced ACT score scale prior to 1991.

Data Sources: CEEB and ACT Assessment Programs. Percentages include both public and private school students.

APPENDIX B

Notes About Tables in Appendix B

Results and Notes Listed in Tables

The SAT I results listed for each district and campus in Table B-1 include average SAT I Verbal, Mathematics, and Total scores of 2000 graduating seniors, number of SAT I examinees who were graduating seniors, total number of graduates, percentage of graduates with scores, number and percentage of SAT I-tested examinees with SAT I Total scores of 1110 or higher, and a "note" column for district- and campus-specific comments. Similarly, ACT results are listed by district and campus in Table B-2, except that average ACT English, Mathematics, Reading, Science Reasoning, and Composite scores are reported rather than SAT I scores. Next, Table B-3 shows by district and by campus the number and percentage of SAT I- and/or ACT-tested graduates and of examinees scoring at or above the criterion on either test, a "test note" column referencing specific tests, and a "note" column in correspondence with Tables B-1 and B-2. In all three tables, campus results are the same as district results for districts with only one senior high school.

More specifically, SAT I and ACT score data for districts and campuses are not listed in Tables B-1 through B-3 when the number of graduates with scores is less than five because of the instability of statistics based on such low numbers of scores. Campuses with fewer than five students tested are excluded from the tables. A "<5 tested" note is printed for districts with fewer than five students tested. This precaution also helps to ensure that single sets of scores cannot be identified or linked with any individual. In addition, districts and campuses with fewer than five students scoring at or above the criterion were given a "<5 high" comment; when it was possible for these score data to be arithmetically inferred from parallel score data from the district and its other campuses, further masking was employed at intervals of 10 (e.g., "<10 masked," "<20 masked," "<30 masked," etc.). Districts and campuses with no graduates tested received a "none tested" note, and those with no TEA-recorded graduates reflect "no grads/TEA," unless further masking was employed. The test note column in Table B-3 displays "SAT only" or "ACT only" when statistics were based on just one of the two tests; "neither" indicates neither test was taken by students.

Table B-4 presents results of the two testing programs when the district data (including charter schools) are aggregated into 25 types of groupings of districts with similar characteristics as defined in the Glossary. From these, results start with district enrollment groupings and end with groupings of the district percentage of teachers with an advanced degree. These groupings allow examination, by the various district characteristics, of the pattern of district average scores and percentages of students tested for each test separately and for percentages of SAT I- and/or ACT-tested graduates and percentages of examinees meeting the score criterion on either test, as defined within AEIS (TEA, in press-b).

Sources of Data for Tables

Overall, data were obtained from the College Board on 104,426 public school graduates in 2000 who participated in the SAT Program's SAT I: Reasoning Test and/or SAT II: Subject Tests and from the American College Testing Program on 59,512 students taking the ACT. District and campus results showed a complete set of SAT I scores for 96,516 graduates and ACT scores for 59,491 graduates. Although the believed effect is small, some amount of inaccuracy may have resulted in using high school codes supplied by the testing programs to link students' scores to schools and districts (personal communication with B. Cumberland, Educational Testing Service, November 11, 1997). In another small set of cases, student miscodings of one of the fields used for student matching may have resulted in more than one set of scores per student (personal communication with M. Farmer, ACT, Inc., July 16, 1998). Such discrepancies may have caused slight imprecision in estimating percentages of graduates tested. The actual computation of percentages of graduates tested included the total number of non-special education graduating seniors obtained from TEA data files for each district and campus. In Tables B-1 through B-3, when the percentage of graduates tested was above 100, it was reset to 100.

Glossary of District Category Descriptions, 1999-00

Texas Education Agency
Glossary of District Category Descriptions, 1999-00
(In Order of Appearance in Table B-4)

Enrollment Groupings

A nine-category grouping based on the total number of students enrolled by district as of the Public Education Information Management System (PEIMS) fall collection date (late October of each year). Enrollment excludes students who are served but not enrolled by districts.

District Type

Classification of school districts based on factors such as size, growth rates, and proximity to urban areas is listed below. Charter school districts form a separate category.

Major Urban. The state's largest metropolitan districts serving the Houston, Dallas, San Antonio, Fort Worth, Austin, and El Paso areas.

Major Suburban. Other districts in and around the major urban areas.

Other Central City. Major districts in other large Texas cities.

Other Central City Suburban. Other districts in and around the other large, but not major, Texas cities.

Independent Town. Largest districts in counties with populations of 25,000 to 100,000, or the number of students enrolled is greater than 75 percent of the largest district.

Non-Metro: Fast Growing. Districts not fitting in any of the above categories but exhibiting a five-year growth rate of at least 20 percent with at least 300 students enrolled.

Non-Metro: Stable. Districts not fitting any of the above categories but with an enrollment exceeding the state median.

Rural. Districts not fitting any of the above categories; districts either with an enrollment between 300 and the state median and a growth rate less than 20 percent, or with an enrollment less than 300.

Charter School Districts. The open-enrollment school districts chartered by the State Board of Education. Charter schools operate in facilities of commercial or nonprofit entities or a school district.

Property Wealth

Total taxable property value divided by enrollment, which indicates district ability to raise local funds on a per pupil basis. The property value used is total taxable value for the last completed calendar year as determined by the Comptroller's Property Tax Division (CPTD). The total number of students is for the 1999-00 school year. The first wealth grouping shows 10 categories; the second simply shows districts above and below state average wealth; the third is a 20-category grouping, with each category representing about five percent of the state's students. The special statutory and charter school districts without taxable property wealth form a separate category in all three wealth groupings.

Total Tax Effort

A four-category tax effort grouping of districts defined by the total effective tax rate, which was determined by dividing the last completed calendar year's total levy amount by that year's CPTD total taxable property value. Rates are expressed per $100 of taxable value. A fifth category is reserved for the six special statutory and charter school districts without property tax levies.

Maintenance and Operations (M&O) Effective Tax Effort

A four-category tax effort grouping of districts showing the M&O effective tax rate, which was determined by dividing the last completed calendar year's M&O levy amount by that year's CPTD total taxable property value. The M&O rates shown include money generated by districts for equalizing wealth. A fifth category is reserved for the special statutory and charter school districts without property tax levies.

Highest Property Value Category

A four-category CPTD classification based on property use. A district is placed into the category that represents its greatest total property value. A fifth category is reserved for the special statutory and charter school districts without taxable property wealth.

Residential. Single-family, multi-family, and residential inventory.

Land. Vacant lots and rural real (taxable).

Oil and Gas. Oil, gas, and minerals.

Business. Commercial and industrial real property, commercial and industrial personal property, and utilities.

Small/Sparse Adjustment

A four-category grouping of districts based on the small/sparse adjustment amount as a percentage of the total adjusted basic allotment amount. The small/sparse percentage represents the extent to which state funding is adjusted to compensate for small and/or sparsely populated districts. A fifth category is reserved for districts receiving no small/sparse adjustment.

Cost of Education Index (CEI) Level

A five-category grouping of districts based on the CEI level. It reflects geographic variations in costs and prices outside district control. The current index, which has a minimum value of 1.0 and maximum of 1.2, was implemented in 1991-92.

Operating Cost Per Pupil

A five-category grouping of districts based on operating cost per student. Operating costs are the sum of all expenditures budgeted for the operation of the district for all funds. The operating expenditures are a subset of the total expenditures; they do not include debt service, capital outlay, or ancillary services expenditures. Per student amounts are the school year expenditures divided by enrollment. The source for budgeted expenditures is the fall PEIMS submission.

Education Service Center (ESC) Region

The state is divided into 20 geographic regions, each served by an ESC. This category reflects the ESC region from which the district receives services, not the geographically assigned ESC region. For the vast majority of districts, these are the same.

TAAS: Percentage Passing All Tests Taken

A five-category grouping of districts based on the percentage of students passing the 2000 Texas Assessment of Academic Skills (TAAS). For Grades 3-8 and 10, the total number of students passing all sections of the English or Spanish versions of the TAAS taken is expressed as a percentage of the total number of students taking one or more tests. This percentage excludes students taking Grade 8 science and social studies tests and includes only those students in the district in October of the school year, which is the percentage used for accountability purposes. A sixth category is reserved for districts not administering the test.

SAT I / ACT: Percentage Taking

A three-category grouping based on the percentage of graduates taking the SAT I and/or the ACT Assessment in the previous year. A fourth category is reserved for districts that had no graduates.

SAT I / ACT: Percentage Scoring At or Above Criterion

A five-category grouping based on the percentage of examinees who scored at or above the criterion (1110 on SAT I Total and/or 24 on ACT Composite) on the SAT I and/or ACT in the previous year. The number meeting the criterion is divided by the number of examinees. A sixth category is reserved for districts that had no examinees.

Density

A four-category grouping based on density, or the number of students enrolled per square mile. District square miles were determined through a joint effort by the State Property Tax Board (SPTB, now the CPTD), the Texas Education Agency, and the Texas Water Commission (TWC). Maps provided by districts to the SPTB were digitized by TWC to determine acreage. A fifth category is reserved for the special statutory and charter school districts without available mileage information.

Pupil Change From Prior Year

A five-category grouping based on the growth or decline in district student population over a one-year period. Districts with declining enrollment represent one category, while the remaining categories show one-year growth rates ranging from "0% to 3%" to "10% and over."

Percentage African American, Hispanic, and Minority Pupils

Three six-category groupings based on the ethnic composition of district student populations, as reported in PEIMS. Minority percentage is calculated as the sum of all non-White populations expressed as a percentage of the total. Non-White populations include American Indian or Alaskan Native; Asian or Pacific Islander; African American, not of Hispanic origin; and Hispanic.

Percentage Economically Disadvantaged Pupils

A six-category grouping based on the percentage of students enrolled in the district who are classified as economically disadvantaged in PEIMS as follows:

a) eligible for free or reduced-price meals under the National School Lunch and Child Nutrition Program;
b) from a family with annual income at/below the federal poverty line;
c) eligible for Aid to Families With Dependent Children (AFDC) or other public assistance;
d) recipient of a Pell Grant or comparable state, need-based, financial assistance program; or
e) eligible for programs assisted under Title II of the Job Training Partnership Act.

Average Teacher Experience

A four-category grouping based on average years of teacher experience. This average is computed by taking the total years of professional experience for each district teacher, multiplying by each teacher's full-time-equivalent (FTE) count, summing these products for the whole district, and dividing by the total teacher FTE count.

Average Teacher Salary

A four-category grouping based on average district teacher salary. This average is computed as the total salary of teachers divided by the total teacher FTE count. Total salary amount does not include any other supplement.

Percentage Minority Teachers

A six-category grouping based on the minority composition of district teaching populations. Minority percentage is calculated by summing all non-White teacher FTEs and dividing by the total teacher FTEs.

Percentage Teachers with Advanced Degrees

A four-category grouping based on the district percentage of teachers with advanced degrees. This percentage is computed as the FTE count of teachers with a master's or doctoral degree divided by the total teacher FTE count.

PUBLICATION ORDER FORM

Purchaser Name _____ Date _____

Send to (name, if different) _____

COMPLIANCE STATEMENT

TITLE VI, CIVIL RIGHTS ACT OF 1964; THE MODIFIED COURT ORDER, CIVIL ACTION 5281, FEDERAL DISTRICT COURT, EASTERN DISTRICT OF TEXAS, TYLER DIVISION

Reviews of local education agencies pertaining to compliance with Title VI Civil Rights Act of 1964 and with specific requirements of the Modified Court Order, Civil Action No. 5281, Federal District Court, Eastern District of Texas, Tyler Division are conducted periodically by staff representatives of the Texas Education Agency. These reviews cover at least the following policies and practices:

(1) acceptance policies on student transfers from other school districts;

(2) operation of school bus routes or runs on a nonsegregated basis;

(3) nondiscrimination in extracurricular activities and the use of school facilities;

(4) nondiscriminatory practices in the hiring, assigning, promoting, paying, demoting, reassigning, or dismissing of faculty and staff members who work with children;

(5) enrollment and assignment of students without discrimination on the basis of race, color, or national origin;

(6) nondiscriminatory practices relating to the use of a student's first language; and

(7) evidence of published procedures for hearing complaints and grievances.

In addition to conducting reviews, the Texas Education Agency staff representatives check complaints of discrimination made by a citizen or citizens residing in a school district where it is alleged discriminatory practices have occurred or are occurring.

Where a violation of Title VI of the Civil Rights Act is found, the findings are reported to the Office for Civil Rights, U.S. Department of Education.

If there is a direct violation of the Court Order in Civil Action No. 5281 that cannot be cleared through negotiation, the sanctions required by the Court Order are applied.

TITLE VII, CIVIL RIGHTS ACT OF 1964 AS AMENDED BY THE EQUAL EMPLOYMENT OPPORTUNITY ACT OF 1972; EXECUTIVE ORDERS 11246 AND 11375; EQUAL PAY ACT OF 1964; TITLE IX, EDUCATION AMENDMENTS; REHABILITATION ACT OF 1973 AS AMENDED; 1974 AMENDMENTS TO THE WAGE-HOUR LAW EXPANDING THE AGE DISCRIMINATION IN EMPLOYMENT ACT OF 1967; VIETNAM ERA VETERANS READJUSTMENT ASSISTANCE ACT OF 1972 AS AMENDED; IMMIGRATION REFORM AND CONTROL ACT OF 1986; AMERICANS WITH DISABILITIES ACT OF 1990; AND THE CIVIL RIGHTS ACT OF 1991.

The Texas Education Agency shall comply fully with the nondiscrimination provisions of all federal and state laws, rules, and regulations by assuring that no person shall be excluded from consideration for recruitment, selection, appointment, training, promotion, retention, or any other personnel action, or be denied any benefits or participation in any educational programs or activities which it operates on the grounds of race, religion, color, national origin, sex, disability, age, or veteran status (except where age, sex, or disability constitutes a bona fide occupational qualification necessary to proper and efficient administration). The Texas Education Agency is an Equal Opportunity/Affirmative Action employer.
